# TEST REPORT

**Reference No.** ..... : WTS18S06114732S

**Manufacturer \*** ..... : ShenZhen EBELONG Technology Co., Ltd.

**Address** ..... : ShenZhen Wisdom Innovation Center Suite A.607 QianJin 2nd Road,  
Bao'an District, ShenZhen GuangDong China

**Factory** ..... : ShenZhen EBELONG Technology Co., Ltd.

**Address** ..... : ShenZhen Wisdom Innovation Center Suite A.607 QianJin 2nd Road,  
Bao'an District, ShenZhen GuangDong China

**Product** ..... : Batteryless wireless switch, Wireless WiFi Controller  
(Semiconductor switch combination)

**Model(s)** ..... : ES2154, ES2254, ES2354, ES2111, ES2211, ES2311, ES2187, ES2287,  
ES2387, ES2165, ES2265, ES2365 for Batteryless wireless switch;  
ERC309, ERC309-H, ERC609 for Wireless WiFi Controller

**Total pages** ..... : 69 pages and 9 pages of photo.

**Standards** ..... : ☐ IEC 60669-1:1998+A1:1999+A2:2006  
☒ EN 60669-1:1999+A1:2002+A2:2008  
Switches for household and similar fixed-electrical  
installations –Part 1: General requirements  
☐ IEC 60669-2-1:2002+A1:2008+A2:2015  
☒ EN 60669-2-1:2004+A1:2009+A12:2010  
Switches for household and similar fixed electrical installations –Part 2-  
1: Particular requirements – Electronic switches

**Date of Receipt sample** ..... : 2018-06-04

**Date of Test** ..... : 2018-06-05 to 2018-06-26

**Date of Issue** ..... : 2018-07-06

**Test Result** ..... : **Pass**

## Remarks:

1. The results shown in this test report refer only to the sample(s) tested, this test report cannot be reproduced, except in full, without prior written permission of the company. The report would be invalid without specific stamp of test institute and the signatures of compiler and approver.
2. "\*" Manufacturer means any natural or legal person who manufactures radio equipment or has radio equipment designed or manufactured, and markets that equipment under his name or trade mark.

<b>Test item description</b> .....	Batteryless wireless switch, Wireless WiFi Controller (Semiconductor switch combination)
<b>Trademark</b> .....	 EDELONG
<b>Model and/or type reference</b> .....	ES2154, ES2254, ES2354, ES2111, ES2211, ES2311, ES2187, ES2287, ES2387, ES2165, ES2265, ES2365 for Batteryless wireless switch;
<b>Rating(s)</b> .....	ERC309, ERC309-H, ERC609 for Wireless WiFi Controller
	100V-240V~, 50/60Hz, Max. 5A for Resistive load; 600W for LED

**Remark:**

Whether parts of tests for the product have been subcontracted to other labs:

☐ Yes

☒ No

If Yes, list the related test items and lab information:

Test items:

Lab information:

**Summary of testing:**

All tests had been assessed for safety with respect to the above test specifications and found to comply with the requirements of the standards.

List of countries addressed: National Differences and Group Differences for CENELEC countries were checked.

**Copy of marking plate:**

For receiver:

For transmitter:

**Remark:**

1. Above label for reference only, final label marking on product shall contain the information at least.
2. Name and address of the Importer and Manufacturer must be affixed on the product when the product placed on the EU market.
3. The height of CE mark shall be at least 5mm, the height of WEEE mark shall be at least 7mm.

<b>Test items particulars:</b>	
Type of electronic switch and its function (examples given in Annex AA).....:	Electronically operated switching device
Pattern number .....	1
Contact opening (gap) and switch performance.....:	micro-gap
Degree of protection against access to hazardous parts and against harmful effects due to the ingress of solid foreign objects.....:	IP2X
Degree of protection against harmful effects due to the ingress of water .....	IPX0
Method of actuating .....	other external influences
Method of mounting .....	flush-type
Method of installation.....:	design A
Type of terminals .....	screw-type
Flexible cable outlet.....:	without
Rated current (A) / Rated load (VA or W) .....	5A
Minimum current (A) / Minimum load (VA or W) .....	--
Kind of load controlled by the switch .....	Resistive load; LED
Rated voltage (V).....:	100-240
Rated frequency (Hz) .....	50/60
Characteristic of fuses .....	Current fuse: 250 V; 5A; T; 1500 A breaking capacity
<b>Possible test case verdicts:</b>	
- test case does not apply to the test object.....:	N/A
- test object does meet the requirement.....:	P (Pass)
- test object does not meet the requirement.....:	F (Fail)
<b>Testing</b> .....	
Date of receipt of test item .....	2018-06-04
Date (s) of performance of tests .....	2018-06-05 to 2018-06-26
<b>General remarks:</b>	
<p>The test results presented in this report relate only to the object tested.</p> <p>This report shall not be reproduced, except in full, without the written approval of the Issuing testing laboratory.</p> <p>"(see Enclosure #)" refers to additional information appended to the report.</p> <p>"(see appended table)" refers to a table appended to the report.</p> <p>Throughout this report a comma (point) is used as the decimal separator.</p>	

**General product information:**

The equipment with models ERC309, ERC309-H and ERC609 are Wireless WiFi Controller.

The product Rating(s) : 100-240V~, 50/60Hz, Max. 5A for Resistive load; 600W for LED

“Batteryless wireless switch” and “Wireless WiFi Controller” are used together.

“Batteryless wireless switch” is a remote control. It is not connecting to the power supply. It powered by kinetic energy, the switch do not have the battery inside.

“Wireless WiFi Controller” is connecting to the power supply and load. It is control by the Batteryless wireless switch. It will be installed in the ceiling or box.

Description	Model name	Figure
“Batteryless wireless switch”	ES2354	Photo 10-18

Description	Model name	Difference
“Batteryless wireless switch”	ES2154, ES2111, ES2187, ES2165	1 gang switch, All the models have the same rating, material, component and size, except for the different model names and colours.
“Batteryless wireless switch”	ES2254, ES2211, ES2287, ES2265,	2 gang switch, All the models have the same rating, material, component and size, except for the different model names and colours.
“Batteryless wireless switch”	ES2354, ES2311, ES2387, ES2365	3 gang switch, All the models have the same rating, material, component and size, except for the different model names and colours.

Description	Model name	Figure
“Wireless WiFi Controller” is used together with any Batteryless wireless switch as above	ERC309	Photo 1-9

**Model list:**

Product name	Model name	Rating	Difference
Wireless WiFi Controller	ERC309, ERC309-H, ERC609	100-240V~, 50/60Hz, Max. 5A for Resistive load; 600W for LED	All models have the same components, internal construction and shape, except for the different model names, enclosure material and enclosure size.

Tests are conducted on model ERC309 and ES2354 to represent the other model.

## EN 60669-1 &amp; EN 60669-2-1

Clause	Requirement + Test	Result - Remark	Verdict
<b>8</b>	<b>MARKING</b>		<b>P</b>
8.1	Switches marked with:		P
	- rated voltage (V) .....	100-240V	P
	- rated control voltage, if different from rated voltage (V) .....		N
	- rated current (A) or rated load (VA or W) .....	Max. 5A for Resistive load and Max. 600W for LED;	P
	- symbol for nature of supply .....		P
	- manufacturer's or responsible vendor's name, trade mark or identification mark .....	EDELONG	P
	- type reference .....	ERC309	P
	- symbol for mini-gap construction (m) .....		N
	- symbol for micro-gap construction ( $\mu$ ) .....	$\mu$	P
	- symbol for semiconductor switching device ( $\epsilon$ ) .....		N
	- first IP characteristic numeral, if declared higher than 2, in which case the second characteristic numeral is also marked .....	IP	N
	- second IP characteristic numeral, if declared higher than 0, in which case the first characteristic numeral is also marked .....	IP	N
	- rated frequency (Hz) .....	50/60Hz	P
	- rating and type of any fuse incorporated .....		P
	- symbol for kind of load (see 8.2) .....		P
	- the term "extension unit", if applicable, followed by the identifying reference .....		P
	- the minimum height for mounting the switch indicated in the installation instruction if there is a restriction (see 10.1) .....		N
	Switches with screwless terminals: marked with an indication of the suitability to accept rigid conductors only (if any) .....		N
	For electronic switches with included automatic function, number of operations shall be stated in the accompanying instruction sheet when number of operation is higher than the indicated in sub clause 19.101, 19.102 and 19.104 and 19.109		N
	- symbol for the adjustment of the delay time, if applicable .....		N
	- symbol for the positions "Permanent on" and "Permanent off", if applicable .....		N
	- symbol for "Delay time" .....		N
8.2	Symbols used: as required in the standard		P

EN 60669-1& EN 60669-2-1			
Clause	Requirement + Test	Result - Remark	Verdict
	Marking for the nature of supply placed next to the marking for rated current and rated voltage		P
	Other particular symbols used are explained in the installation instructions		N
8.3	Marking of electronic switch placed on the main part:		P
	- rated current or rated load, rated voltage, symbol for nature of supply, rated frequency (if any), type of load, rating and type of any incorporated fuse (marked on the fuse-holder or in proximity of the fuse)		P
	- either the name, trade mark, or identification mark of the manufacturer or of the responsible vendor		P
	- length of insulation to be removed, if any		N
	- symbol for mini-gap construction, micro-gap construction or semiconductor switching device, if applicable		P
	- type reference		P
	Information concerning more than one type of load not already marked on the electronic switch are stated in the accompanying instruction sheet		N
	Minimum and maximum current/load are stated for each type of load		P
	Information of the iron core transformer intended to be used with the dimmer are given in the instruction sheet		N
	Cover plates necessary for safety purposes and intended to be sold separately: marked with the manufacturer's or responsible vendor's name, trade mark or identification mark and type reference		N
	IP code, when applicable, marked so as to be easily discernible when the switch is mounted and wired as in normal use		N
	Marking clearly visible and easily legible		P
	Markings are placed on parts which cannot be removed without the use of a tool		P
8.4	Terminals for phase conductors (supply conductors): identified unless method of connection is of no importance, self evident or indicated on a wiring diagram	L IN N IN OUT N 	P
	Indications not placed on screws or other easily removable part		P
	Terminals associated with any one pole for switches of pattern number 2, 3, 03 and 6/2: similar identification differing from that of terminals associated with other poles		N

## EN 60669-1&amp; EN 60669-2-1

Clause	Requirement + Test	Result - Remark	Verdict
	Switches with more than two terminals: load terminal marked with an arrow pointing away from the terminal or with one of the symbol mentioned in 8.2		N
	Other terminals marked corresponding to the installation instructions		N
	Installation not made clear by the markings: a wiring diagram is provided with each electronic switch		N
	Terminals for the control circuit of a priority RCS with a current sensitive coil or voltage sensitive coil are marked with the appropriate symbol indicated in 8.2		P
	Terminals for the control circuit: marked according to IEC 60445 and/or with the symbols according to 8.2		N
8.5	Neutral terminals: N.....:		P
	Earthing terminals: [earth symbol] .....		N
	Markings not placed on screws or other easily removable parts		P
	Terminals for conductors not forming part of the main function of the switch:		N
	- clearly identified unless their purpose is self evident, or		N
	- indicated in a wiring diagram fixed to the accessory		N
	Identification of equipment terminals may be achieved by:		N
	- their marking with graphical symbols according to IEC 60417 or colours and/or alphanumeric system, or		N
	- their physical dimension or relative location		N
8.6	Switches marked to indicate the switch position: they are so marked that the direction of movement of the actuating member to its different positions or the actual position is clearly indicated.....:		N
	Switches having more than one actuating member: marking indicates the effect achieved by the operation		N
	Marking clearly visible on the front of the switch		N
	Not possible to fix cover, cover plate, or removable actuating members in an incorrect position		N
	Symbols for "on" and "off" not used for indication of switch positions unless clearly indicate the direction of movement of the actuating members		N
	Off-state not marked with an "O" if the circuit on the load side is considered as live		N
8.6.101	Actual state of electronic switches intended to control the brightness of lamps is indicated		P
	- marking on the on/off-state position		N

EN 60669-1& EN 60669-2-1			
Clause	Requirement + Test	Result - Remark	Verdict
	- indicator lamp		P
	- adjusting the lamp dimmer in the lowest control state and at rated voltage minus 10%: light still visible		N
	When the indication of the electronic switch state is given only by the lamp, adjustment of the lamp at the lowest control state is made as specified in the following:		N
	- for incandescent lamps:		P
	the adjustment of lamp dimmers is made by the manufacturer		P
	not possible to reduce the lowest setting without a tool		P
	- for fluorescent lamps:		N
	the adjustment of lamp dimmers is made by the manufacturer		N
	it is possible for the installer to alter the lowest setting if indicated in an installation instruction		N
8.7	Red colour only for push-button to open the circuit		N
8.8	Special precautions necessary to take when installing the switch: details of these and clear information given in an instruction sheet which accompanies the switch		P
	Electronic switch containing a viewing window (lens) intended to be mounted at a height greater 1.7 m: information stated in the instruction sheet		N
8.9	Marking durable and easily legible. Test: 15 s with water and 15 s with petroleum spirit		P
<b>9</b>	<b>CHECKING OF DIMENSIONS</b>		<b>N</b>
	Switches and boxes comply with the appropriate standard sheets, if any		N
	Electronic switches with dimensions other than those specified in the standard sheets (if any) if they are supplied with suitable boxes		N
<b>10</b>	<b>PROTECTION AGAINST ELECTRIC SHOCK</b>		<b>P</b>
10.1	Switches: live parts not accessible		P
	Switches designed to be fitted with pilot lights supplied at voltages other than ELV have means to prevent direct contact with the lamp		N
	Test with standard test finger shown in figure 1 of IEC 60529		P
	Switches with thermoplastic or elastomeric material: additional test carried out at 35 °C ± 2 °C with the test probe 11 of IEC 61032 (75 N for 1 min)		P

EN 60669-1& EN 60669-2-1			
Clause	Requirement + Test	Result - Remark	Verdict
	Test probe applied to:		N
	- thin-walled knock-outs with a force of 10 N		N
	- viewing windows or the like on electronic switches intended to be mounted at a height > 1,7 m with a force of 30 N		N
	During the test: switches not deform and no live parts accessible		P
10.2	Knobs, operating levers, push buttons, rockers and the like: of insulating material, unless:		P
	- accessible metal parts separated from metal parts of mechanism by double or reinforced insulation, or	No accessible metal parts	N
	- reliably connected to earth		N
	For touch sensitive electronic switches the associated protective impedance does not have to comply with the requirements of clauses 16 and 23		N
	Accessible parts (for example, sensing surface) of electronic switches with IPX0 are connected to live parts by means of a protective impedance that:		N
	- consists of at least two independent resistors or independent capacitors in series of the same nominal value, or a combination of both		N
	- resistors comply with 102.3		N
	- capacitors comply with 102.2		N
	The removal of protective impedance is only possible by destruction of the electronic switch or by rendering it unusable		N
	Test carried out between accessible metal parts and earth, through a non-inductive resistor of 2 kΩ:		N
	current measured: $\leq 0,7$ mA (peak value), for a.c. up to 1 kHz .....		N
	current measured: $\leq 0,7$ mA multiplied by the value of frequency in kHz, but not exceed 70 mA, for a.c. above 1 kHz .....		N
	current measured: $\leq 2$ mA, for d.c. ....		N
10.3	Accessible parts of switches with $I_n \leq 16$ A: made of insulating material		P
10.3.1	Metal covers or cover plates protected by supplementary insulation made by insulating linings or insulating barriers		N
	Insulating linings or insulating barriers:		N
	- cannot be removed without being permanently damaged, or designed that		N

EN 60669-1& EN 60669-2-1			
Clause	Requirement + Test	Result - Remark	Verdict
	- cannot be replaced in an incorrect position; if they are omitted, accessories are rendered inoperable or manifestly incomplete; there is no risk of accidental contact between live parts and metal covers or cover plates; precautions are taken to prevent creepage distances or clearances becoming less than the values specified in clause 23		N
10.3.2	Earthing of metal covers or cover plates: connection of low resistance		N
10.4	Metal parts of mechanism not insulated from live parts: not protrude from enclosure		P
	Switches operated by means of a removable key or similar device: metal parts of mechanism insulated from live parts		N
10.5	Metal parts of mechanism not accessible and insulated from accessible metal parts, unless		P
	- separated from live parts (creepage distances and clearances have at least twice the value specified in clause 23), or		N
	- reliably connected to earth		N
10.6	Switches operated by means of a removable key or an intermediate part: key or an intermediate part can only touch parts insulated from live parts		N
	key or intermediate part: insulated from metal parts of mechanism, unless		N
	creepage distances and clearances between live parts and metal parts of mechanism have at least twice the values specified in clause 23		N
10.7	Cord-operated switches: impossible to touch live parts when fitting or replacing the pull cord		N
10.101	If a cover or cover-plate or a fuse can be removed without a tool or if the installation instructions for the user indicate that, for the purpose of maintenance, when replacing the fuse, covers and cover plates fastened by means of a tool have to be removed, the protection against contact with live parts is assured even after removal of cover or cover-plate (this requirement does not apply when the electronic switch must be dismantled from its supporting means for the replacement of the fuse-link)		P
	Compliance is checked with the test probe B of IEC 61032 (10 N); test probe does not touch live parts		N
10.102	Hole in electronic switches for adjusting the setting:		N
	The adjustment does not involve the risk of an electric shock		N
	Compliance is checked by applying a test pin according to figure 101 through the hole; test pin does not touch live parts		N

EN 60669-1& EN 60669-2-1			
Clause	Requirement + Test	Result - Remark	Verdict
10.103	Ventilation openings over live parts:		N
	A foreign body introduced into these openings do not come into contact with any live parts		N
	Compliance is checked by applying the test probe 13 of IEC 61032 through the openings; pin of test probe does not touch live parts		N
11	<b>PROVISION FOR EARTHING</b>		N
	Clause not applicable to SELV electronic switches		N
11.1	Accessible metal parts: provided with, or permanently and reliably connected to, an earthing terminal		N
11.2	Earthing terminals: with screw clamping or screwless terminals and comply with clause 12		N
	Capacity of earthing terminals of the same size as the corresponding terminals for the supply conductors		N
	Any additional external earthing terminal has a size suitable for conductors of at least 6 mm <sup>2</sup> (mm <sup>2</sup> ) .....		N
11.3	Surface-type switches with an enclosure of insulating material, with IP > X0 and more than one cable inlet, are provided for the continuity of the earthing circuit with:		N
	- an internal fixed earthing terminal, or		N
	- adequate space for a floating terminal allowing the connection of an incoming and outgoing conductor		N
11.4	Connection between earthing terminal and accessible metal parts: of low resistance		N
	Test current equal to 1,5 I <sub>n</sub> or 25 A (A) .....		--
	Resistance ≤ 0,05 Ω (Ω) .....		N
11.101	Printed circuit of printed circuit boards board may be used to provide protective earthing continuity if:		N
	- at least two tracks with independent soldering points which withstand a single short circuit test similar to 101.3 and immediately after the switch shall fulfil the requirements of 11.4, or		N
	- a single track is used with two independent means of connection on each end which will withstand a single short circuit test similar to 101.3 and immediately after the switch shall fulfil the requirements of 11.4,		N
	In addition:		N
	- the laminated of the printed circuit board shall consist of epoxide glass fabric copper-clad laminated sheet, and		N

EN 60669-1& EN 60669-2-1			
Clause	Requirement + Test	Result - Remark	Verdict
	- the printed circuit boards shall comply with the overload test of 101.1.1.2.		N
<b>12</b>	<b>TERMINALS</b>		P
12.1	General		P
	Switches provided with screw-type terminals or with screwless terminals .....	Provided with separate terminal, with screw-type approval terminals	P
	Clamping means of terminals: not serve to fix any other components		P
	All the test on terminals, with the exception of the test of 12.3 11, made after the test of 15.1		P
	Terminals having screw clamping complying with IEC 60998-2-1 are considered to be in compliance with the requirements and the tests of Subclause 12.2, except those of 12.2.6 and 12.2.7 and 12.2.8, provided they are chosen according Table 2.		N
12.2	Terminals with screw clamping for external copper conductors		P
12.2.1	Switches provided with terminals which allows the proper connection of copper conductors as shows in table 2		N
	Rated current (A) .....		N
	Type of conductor (rigid / flexible) .....		N
	Smallest / largest cross-sectional area (mm <sup>2</sup> ) .....		N
	Diameter of largest conductor (mm) .....		N
	Figure of terminal .....		N
	Minimum diameter D (minimum dimensions) of conductor space: required (mm); measured (mm) ... :		N
12.2.2	Terminals allow the conductor to be connected without special preparation		N
12.2.3	Terminals have adequate mechanical strength		N
	Screws and nut for clamping the conductors have metric ISO thread or a comparable thread		N
	Screws not of soft metal such as zinc or aluminium		N
12.2.4	Terminals resistant to corrosion		N
12.2.5	Screw-type terminals clamp the conductor(s) without undue damage		N
	During the test: conductor not slip out, no break near clamping unit and no damage		N
12.2.6	Terminals clamp the conductor reliably between metal surfaces		P
	During the test: conductor not move noticeably		P

EN 60669-1& EN 60669-2-1			
Clause	Requirement + Test	Result - Remark	Verdict
12.2.7	Terminals designed or placed that the conductor cannot slip out while the clamping screws or nuts are tightened		P
	After the test: no wire of the conductor escaped outside the clamping unit thus reducing creepage distances and clearances to values lower than those indicated in clause 23		P
12.2.8	Terminals not work loose from their fixing to the switch		P
	Torque test:		P
	- rated current (A) ..... : 5A		P
	- solid rigid copper conductor of the largest cross-sectional area (mm <sup>2</sup> ) (table 2) ..... : 2.5 mm <sup>2</sup>		P
	- torque (Nm) (table 3 or appropriate figures 1, 2, 3, 4) ..... : 0.4 Nm		P
	Screws and nuts tightened and loosened 5 times. During the test: terminals not work loose and show no damage		P
12.2.9	Clamping screws or nuts of earthing terminals: adequately locked against accidental loosening, not possible to loosen them without the aid of a tool		P
12.2.10	Earthing terminals: no risk of corrosion		N
	Body of brass or other metal no less resistant to corrosion		N
	If the body is a part of a frame or enclosure of aluminium alloy, precautions are taken to avoid the risk of corrosion		N
12.2.11	Pillar terminals: distance g no less than the value specified in figure 1: required (mm); measured (mm) : Required: 1.5(mm); measured: 1.6 (mm)		P
	Mantle terminals: distance g no less than the value specified in figure 5: required (mm); measured (mm) :		N
12.2.12	Lug terminals:		N
	- used only for switches having rated current $\geq 40$ A		N
	- fitted with spring washers or equally effective locking means		N
12.3	Screwless terminals for external copper conductors		N
12.3.1	Screwless terminals of the type suitable for:		N
	- for rigid copper conductors only, or		N
	- for both rigid and flexible copper conductors (tests carried out with rigid and then repeated with flexible conductors)		N
12.3.2	Screwless terminals provided with clamping units which allow the proper connection of rigid or of rigid and flexible conductors having nominal cross-sectional areas as shown in table 7		N

## EN 60669-1&amp; EN 60669-2-1

Clause	Requirement + Test	Result - Remark	Verdict
	Rated current (A) .....		--
	Type of conductor (rigid / flexible) .....		--
	Smallest / largest cross-sectional area (mm <sup>2</sup> ) .....		--
	Diameter of largest rigid conductor (mm) .....		--
	Diameter of largest flexible conductor (mm) .....		--
12.3.3	Screwless terminals allow the conductor to be connected without special preparation		N
12.3.4	Parts of screwless terminals intended for carrying current of materials as specified in 22.5		N
12.3.5	Screwless terminals clamp specified conductors with sufficient contact pressure without undue damage to the conductor		N
	Conductor clamped between metal surfaces		N
12.3.6	It is clear how the connection and disconnection of the conductors is to be made		N
	Disconnection of a conductor require an operation, other than a pull, so that can be made manually with or without a general-purpose tool		N
	It is not possible to confuse the opening for the use of a tool with the opening intended for the conductor		N
12.3.7	Screwless terminals intended for the interconnection of two or more conductors:		N
	- during insertion, operation of clamping means of one of the conductors is independent of operation of that for the other conductor(s);		N
	- during disconnection, conductors can be disconnected either at the same time or separately;		N
	- each conductor introduced in a separate clamping unit.		N
	It is possible clamp securely any number of conductors up to the maximum as designed. Number of conductors; Nominal cross-sectional area (mm <sup>2</sup> ) .....		N
12.3.8	Screwless terminals: adequate insertion obvious and over-insertion prevented		N
	Screwless terminals of switches: undue insertion of the conductor prevented by a stop if further insertion is liable to reduce creepage distances and/or clearances required in table 20 or to influence the mechanism		N
12.3.9	Screwless terminals properly fixed to the switch		N
	Not work loose when conductors are connected or disconnected		N
	Self-hardening resins used to fix terminals not subject to mechanical stress		N

EN 60669-1& EN 60669-2-1			
Clause	Requirement + Test	Result - Remark	Verdict
12.3.10	Screwless terminals withstand mechanical stresses occurring in normal use		N
	During application of the pull conductor not come out of the terminal		N
	Test with apparatus shown in figure 10		N
	During the test conductors not move noticeably in the clamping unit		N
	After these tests: neither terminals nor clamping means have worked loose and conductors show no deterioration		N
12.3.11	Screwless terminals withstand electrical and thermal stresses occurring in normal use		N
	After the test: inspection show no changes		N
	Repetition of test according to 12.3.10: screwless terminals withstand mechanical stresses occurring in normal use		N
	During application of the pull conductor not come out of the terminal		N
	Test with apparatus shown in figure 10		N
	During the test conductors not move noticeably in the clamping unit		N
	After these tests: neither terminals nor clamping means have worked loose and conductors show no deterioration		N
12.3.12	Screwless terminals: connected rigid solid conductor remains clamped, even when deflected during normal installation		N
13	<b>CONSTRUCTIONAL REQUIREMENTS</b>		<b>P</b>
13.1	Insulating lining, barriers and like: adequate mechanical strength and secured in a reliable manner		P
13.2	Switches constructed so as to permit:		P
	- easy introduction and connection of the conductors in the terminals;		P
	- correct positioning of the conductors		P
	- easy fixing of the switch to a wall or in a box		P
	- adequate space between underside of the base and the surface on which the base is mounted or between the sides of the base and the enclosure (cover or box)		P
	Surface-type switches: fixing means do not damage insulation of the cable		N

EN 60669-1& EN 60669-2-1			
Clause	Requirement + Test	Result - Remark	Verdict
	Switches classified as design A: permit easy positioning and removal of the cover or cover plate, without displacing the conductors		P
13.3	Covers, cover-plates and actuating members or parts of them intended to ensure protection against electric shock:		P
	- held in place at two or more points by effective fixings		P
	- fixed by means of a single fixing, for example by a screw, provided that they are located by another means (for example by a shoulder)		N
	Fixings of covers, cover-plates or actuating members of switches of design A serves to fix the base: there is means to maintain the base in position, even after removal of the covers, cover-plates or actuating members		P
13.3.1	Covers, cover plates or actuating members whose fixing is of the screw-type:		N
	Compliance checked by inspection only		N
13.3.2	Covers, cover plates or actuating members whose fixing is not dependent on screws and whose removal is obtained by applying a force in a direction approximately perpendicular to the mounting/supporting surface:		P
	Compliance checked, when their removal may give access, with the standard test finger:		P
	to live parts: by the test of 20.4 (verification of the non-removal and the removal)		P
	to non-earthed metal parts separated from live parts by creepage distances and clearances according to table 20: by the test of 20.5 (verification of the non-removal and the removal)		N
	only to insulating parts, or earthed metal parts, or metal parts separated from live parts by creepage distances and clearances twice those according to table 20, or live parts of SELV circuits not greater than 25 V a.c.: by the test of 20.6 (verification of the non-removal and the removal)		P
13.3.3	Covers, cover-plates or actuating members whose fixing is not dependent on screws and whose removal is obtained by using a tool, in accordance with the manufacturer's information given in an instruction sheet or in a catalogue:		N
	Compliance checked, when their removal may give access, with the standard test finger:		N
	to live parts: by the test of 20.4 (verification of the non-removal only)		N
	to non-earthed metal parts separated from live parts by creepage distances and clearances according to table 20: by the test of 20.5 (verification of the non-removal only)		N

## EN 60669-1&amp; EN 60669-2-1

Clause	Requirement + Test	Result - Remark	Verdict
	only to insulating parts, or earthed metal parts, or metal parts separated from live parts by creepage distances and clearances twice those according to table 20, or live parts of SELV circuits not greater than 25 V a.c.: by the test of 20.6 (verification of the non-removal only)		N
13.4	Switches: no free openings in their enclosures according to their IP classification		P
	Free openings according to 10.102 and 10.103 are accepted		N
13.5	Knobs of electronic switches are securely fixed in a reliable manner		N
	knobs used to indicate the position of switches: not possible to fix them in a wrong position, if this may result in a hazard		N
	Pull and push tests:		N
	- axial pull is likely to be applied: 30 N for 1 min		N
	- axial pull is unlikely to be applied: 15 N for 1 min		N
	- axial push: 30 N for 1 min		N
	During and after these tests:		N
	- the electronic switch shows no damage		N
	- an knob have not moved so as to impair compliance with this standard		N
13.6	Screws or other means for mounting the switch on a surface or in a box or enclosure: easily accessible from the front.		N
	Fixing means not serve any other fixing purpose		N
13.7	Combinations of switches, or of switches and socket-outlets, comprising separate bases: correct position of each base ensured		N
	Fixing of each base independent of the fixing of the combination to the mounting surface		N
13.8	Accessories combined with switches: comply with their standard		N
13.9	Surface-type switches with IP > 20 are in according to their classification when fitted with conduits or with sheathed cables		N
	Surface-type switches with IPX4 or IPX5 have provisions for opening a drain hole		N
	Switches provided with a drain hole: it is not less than 5 mm in diameter, or 20 mm <sup>2</sup> in area with a width and a length not less than 3 mm .....: Ø mm / mm <sup>2</sup>		N
	Drain hole: effective		N
	Lid springs (if any): of corrosion resistant material (bronze or stainless steel)		N

EN 60669-1& EN 60669-2-1			
Clause	Requirement + Test	Result - Remark	Verdict
13.10	Switches to be installed in a box: conductor ends can be prepared after the box is mounted in position, but before the switch is fitted in the box		P
	Base have adequate stability when mounted in the box		P
13.11	Surface-type switches with IP > X0, pattern numbers 1, 5 and 6, with more than one inlet opening, provided with:		N
	- fixed additional terminal complying with the requirements of clause 12, or		N
	- adequate space for a floating terminal		N
13.12	Inlet openings: allow the introduction of the conduit or the sheath of the cable		N
	Surface-type switches: intended conduit or protective covering can enter at least 1 mm into the enclosure		N
	Inlet openings for conduit entries of surface-type switches: capable of accepting conduit sizes of 16, 20, 25 or 32 or a combination of at least two of these sizes not excluding two of the same size .....		N
	Inlet openings for cable entries of surface-type switches: capable of accepting cables having the dimensions specified in table 12 or be as specified by the manufacturer: rated current (A); limits of external diameter of cables min/max (mm) .....		N
13.13	Surface-type switches: provision for back entry (if are intended)		N
13.14	Membranes or the like (if provided): replaceable		N
13.15	Requirements for membranes in inlet openings		N
13.15.1	Membranes, lenses and the like reliably fixed and not displaced by the mechanical and thermal stresses occurring in normal use		N
	Test on electronic switches fitted with membranes, lenses and the like subjected to the ageing treatment specified in 15.1:		N
	Electronic switches placed at 40 °C ± 2 °C for 2 h; force of 30 N applied for 5 s by means of the tip of test probe 11 of IEC 61032. During these tests: membranes, lenses and the like are not deformed, live parts not accessible		N
	Membranes, lenses and the like likely to be subjected to an axial pull: axial pull of 30 N applied for 5 s. During this test: membranes, lenses and the like not come out		N
	Test repeated on membranes, lenses and the like not subjected to any treatment		N
13.15.2	Membranes in inlet openings: introduction of the cables into the accessory permitted when the ambient temperature is low		N

EN 60669-1& EN 60669-2-1			
Clause	Requirement + Test	Result - Remark	Verdict
	Test on membranes not subjected to the ageing treatment specified in 15.1 and fitted with the switches		N
	Switches kept at -5 °C for 2 h: possibility to introduce cables of the heaviest type through the membranes		N
	After the test: no harmful deformation, cracks or similar damage		N
13.16	Flexible cable outlet switches: flexible cable (60245 IEC 66 or 60227 IEC 53, or as specified by the manufacturer) may enter the switch through a suitable hole, groove or gland .....		N
	Maximum dimension of flexible cable having conductors specified in table B.1 accepted by the entry:		N
	- rated current (A) .....		--
	- cross-sectional area (mm <sup>2</sup> ) (min 1,5 mm <sup>2</sup> ) .....		--
	Entry shaped to prevent damage to the flexible cable		N
	Switches intended to be connected via a flexible cable to an electronic extension unit having a rated current equal to the rated current of the electronic switch: flexible cable complies with 60245 IEC 66 or 60227 IEC 53 with a minimum cross sectional area of 0,75 mm <sup>2</sup> .....		N
	Switches intended to be connected via a flexible cable to an electronic extension unit having a rated current lower than the rated current of the electronic switch: flexible cable complies with the requirements of 13.103 .....		N
	Switches with flexible cable outlet: provided with cable anchorage		N
	Cable anchorage: contains the sheath, of insulating material or provided with an insulating lining fixed to the metal parts		N
	Cable anchorage: anchor the flexible cable securely to the switch		N
	Cable anchorage cannot be released from the outside		N
	Use of a special purpose tool not required		N
	Screws: not serve to fix any other component, unless		N
	- switch is rendered manifestly incomplete if component omitted or replaced in an incorrect position, or		N
	- component cannot be removed without further use of a tool		N

EN 60669-1& EN 60669-2-1			
Clause	Requirement + Test	Result - Remark	Verdict
	Pull test (30 N, 25 times): cable 60227 IEC 53, cross-sectional area 1,5 mm <sup>2</sup> ; torque (Nm) (2/3 table 3) .....		N
	Torque test: torque 0,15 Nm for 1 min, cable not displaced > 2 mm .....		N
	Pull test (60 N, 25 times): cable 60245 IEC 66, diameter (mm) of cable; torque (Nm) (2/3 table 3) ..		N
	Torque test: torque 0,35 Nm for 1 min, cable not displaced > 2 mm .....		N
	Test voltage of 2000 V a.c. applied for 1 min between the conductors and the cord anchorage:		N
	During the test: insulation of flexible cable not damaged (no breakdown or flashover)		N
13.101	Cut-outs in electronic switches for motor speed control circuits: non-self-resetting		N
13.102	Electronic switches for the control of the voltage of iron core transformers for extra low-voltage incandescent lamps (for example, halogen): maximum tolerance of the phase-control angle between the positive and negative half-wave of $\pm 2^\circ$ :		N
13.103	TDS shall be of the resetting type		N
<b>14</b>	<b>MECHANISM</b>		P
	Clause only applicable to electronic switches provided with mechanical switching devices		P
14.1	Actuating member of a switch, when released, automatically take up the position corresponding to that of moving contacts		P
14.2	Moving contact of switches can come to rest only in "on" and "off" positions		P
	Intermediate position permissible if:		P
	- it corresponds to the intermediate position of the actuating member, and		P
	- the insulation between fixed and moving contacts is adequate. Electric strength test as specified in 16.2: test voltage a.c. for 1 min (V) .....	500 V / 750 V / 1250 V / 2000 V	P
14.3	No undue arcing in slowly operation		P
	Test carried out at the end of the test of clause 19.1: breaking of the circuit 10 times, actuating member moved over a period of 2 s. During the test: no sustained arcing		P
14.4	Switches of pattern numbers 2, 3, 03 and 6/2 make and break all poles substantially simultaneously		N
	Neutral pole of switches of pattern numbers 03 not make after or break before the other poles		N

EN 60669-1& EN 60669-2-1			
Clause	Requirement + Test	Result - Remark	Verdict
14.5	Action of the mechanism: independent of the presence of cover or cover plate. Test: no flicker		P
14.6	Cord-operated switches: effecting a change by application and removal a pull not exceeding:		N
	- 45 N applied vertically, and		N
	- 65 N applied at $45^\circ \pm 5^\circ$		N
14.101	Position indicator used in RCS equipped with an incorporated hand-operated device indicates the position of the switching circuit clearly and without ambiguity		P
	TDS equipped with an incorporated hand-operated device and a position indicator is used indicates the position of the switching circuit clearly and without ambiguity		N
<b>15</b>	<b>RESISTANCE TO AGEING, PROTECTION PROVIDED BY ENCLOSURES OF SWITCHES, AND RESISTANCE TO HUMIDITY</b>		<b>P</b>
15.1	Resistance to ageing		P
	Switches and boxes placed for 7 days (168 h) in a heating cabinet at $70^\circ\text{C} \pm 2^\circ\text{C}$	70 °C, 168 h	P
	- no crack visible after test with normal or corrected vision without additional magnification		P
	- no sticky or greasy material as a result of heat		P
	- no trace of cloth (forefinger pressed with 5 N)		P
	- no other damage as a result of heat		P
15.2	Protection provided by enclosures of switches		P
15.2.1	Protection against access to hazardous parts and against harmful effects due to ingress of solid foreign objects		P
	Enclosure of the switch provides a degree of protection against access to hazardous parts and against harmful effects due to ingress of solid foreign objects in accordance with the IP classification of the switch		P
	Glands: torque (Nm) (2/3 of torque applied in 20.3) :		--
	Screws of the enclosure: torque (Nm) (2/3 table 3) .....		--
15.2.1.1	Protection against access to hazardous parts		P
	Appropriate test according to IEC 60529 .....: IP20		P
15.2.1.2	Protection against harmful effects due to ingress of solid foreign objects		P
	Appropriate test according to IEC 60529 .....: IP20		P
	Dust not penetrate in quantity to interfere with satisfactory operation or to impair safety		P
15.2.2	Protection against harmful effects due to ingress of water		N

EN 60669-1& EN 60669-2-1			
Clause	Requirement + Test	Result - Remark	Verdict
	Enclosure of switches provide a degree of protection against harmful effects due to ingress of water in accordance with their IP classification		N
	Appropriate test according to IEC 60529 ..... : IP		N
	Flush-type and semi-flush-type switches fixed:		N
	- in a test wall using an appropriate box in accordance with the manufacturer's instructions		N
	- in a test wall according to figure 27		N
	Screws of the enclosure: torque (Nm) (2/3 table 3) ..... :		--
	Glands: torque (Nm) (2/3 of torque applied in table 19) ..... :		--
	Specimens withstand an electric strength test specified in 16.2 which is started within 5 min of completion of the test		N
15.3	Resistance to humidity		P
	Switches proof against humidity which may occur in normal use		P
	Compliance checked by a humidity treatment carried out in a humidity cabinet containing air with relative humidity maintained between 91 % and 95 %. Specimens kept in the cabinet for:		P
	- 2 days (48 h) for switches with IPX0	93 %, 48 h	P
	- 7 days (168 h) for switches with IP>X0		N
	After this treatment: specimens show no damage		P
16	<b>INSULATION RESISTANCE AND ELECTRIC STRENGTH</b>		P
16.1	The insulation resistance measured 1 min after application of 500 V d.c.	See appended table 16.1	P
16.2	Electric strength: a.c. test voltage applied for 1 min	See appended table 16.2	P
17	<b>TEMPERATURE RISE</b>		P
17.1	Switches so constructed that the temperature rise in normal use is not excessive		P
	No oxidation or any other deterioration of contacts, if any		P
	Material and components of electronic switch are not adversely effected by the temperature rise in normal use		P
	During the test:		P
	- electronic switch state not change		P
	- fuses and other protective devices not operate		P
	- permissible temperature rises determined in table 102, column concerning clause 17, not exceeded	See appended table 17	P

EN 60669-1& EN 60669-2-1

	Tracking test with solution A of IEC 60112	See appended table 24.2	N
<b>25</b>	<b>RESISTANCE TO RUSTING</b>		<b>N</b>
	Ferrous parts protected against rusting		N
	Test: 10 min in carbontetrachloride, trichloroethane or equivalent degreasing agent, 10 min 10 % solution of ammonium chloride, 10 min in a box with air saturated with moisture and 10 min at 100 °C ± 5 °C:		N
	No signs of rust		N
<b>26</b>	<b>EMC REQUIREMENTS</b>		<b>P</b>
		See EMC test report: WTS18S05113605E for details.	P
	Electronic switches designed to operate correctly under the conditions of electromagnetic environment in which they are intended to be used		P
26.1	Immunity		P
	Electronic switches designed so that the switch state (ON or OFF) and/or the setting value are protected against interference		P
	Type of load .....		--
	Test current: In (A) / Rated load (W or VA) .....		--
	Test voltage: Vn (V) .....		--
	Variation of less than ± 10 % of the value of the output power (rms) is not considered to be a change of setting		P
	Electronic switches shall be tested according to Table 104 with or without operation as specified in the relevant paragraph.		P
	If the load connected to the electronic switch is controlled by mechanical switching devices and no semiconductor devices are present in the load circuit, test is conducted with resistive load only		P
	For test without operation the electronic switch is tested in the following states:		P
	a) in the ON state, highest setting		P
	b) in the ON state, lowest setting		P
	For electronic switches whose cycle of operation is limited by their application, the rate of operation during the test shall be specified by the manufacturer.		P
26.1.1	Voltage dips and short interruptions		P

## EN 60669-1&amp; EN 60669-2-1

Clause	Requirement + Test	Result - Remark	Verdict
	Electronic switch tested using the equipment specified in IEC 61000-4-11 in accordance with table 105: sequence: 3 dips/interruptions (duration: 10 cycles at rated frequency) with interval of 10 s minimum between each test event:		P
	The test shall be done on the power supply lines of the electronic switch.		P
	During the test, the electronic switch is not operated		P
	During the test, the state and setting of electronic switch may alter, flickering is neglected.		P
	Test level: 0 % $U_T$		P
	Test level: 40 % $U_T$		P
	Test level: 70 % $U_T$		P
	After the test: electronic switch is in the original state and the setting is unchanged		P
	After the test, the electronic switch shall be in the original state and setting and shall operate as intended.		P
26.1.2	Surge immunity test for 1,2/50 $\mu$ s wave impulses		P
	Test carried out according to IEC 61000-4-5 applying two positive discharges and two negative discharges at each of the following angles 0°, 90°, 270°, at a repetition rate of (60 $\pm$ 5) s, with an open-circuit test voltage of Table 110		P
	A test with lower voltages is not required		P
	During the test, the electronic switch is not operated		P
	During the test, the state and setting of electronic switch may alter, flickering is neglected.		P
	After the test, the electronic switch shall be in the original state and setting and shall operate as intended.		P
26.1.3	Electrical fast transient/burst test		P
	Test carried out according to IEC 61000-4-4 in accordance with table 106, duration of the test 1 min +5/0 s for each positive and negative polarities: open-circuit output test voltage ( $\pm$ 10 %):		P
	During the test, the electronic switch is not operated		P
	Supply terminals/terminations: 1 kV		P
	Control terminals/terminations: 0,5 kV		P
	During the test, the state and setting of the electronic switch may alter, flickering caused by the electronic switch is allowed.		P
	After the test: the electronic switch shall be in the original state and setting and shall operate as intended.		P
26.1.4	Electrostatic discharge test		P

## EN 60669-1&amp; EN 60669-2-1

Clause	Requirement + Test	Result - Remark	Verdict
	Electronic switch not intended to operate incandescent lamp: test carried out with only one load of the loads specified within the manufacturer's instructions .....		P
	Test carried out according to EN 61000-4-2 applying 10 positive and 10 negative discharge:		P
	A test with lower voltages is not required		P
	During the test , the electronic switch is not operated		P
	During the test , the state and setting of electronic switch may alter, flickering is neglected.		P
	- contact discharge to the conductive surface and to coupling planes (test voltage: 4 kV)		P
	- air discharge at insulating surfaces (test voltage: 8 kV)		P
	After the test: the electronic switch shall be in the original state and setting and shall operate as intended.		P
	Electronic switches with an adjustable time delay devices shall be adjusted in such way that the time delay is higher than the testing time		P
26.1.5	Radiated electromagnetic field test		P
	Test applicable only to electronic switches containing infra-red (IR) receivers, radio frequency receivers, passive infra-red (PIR) devices, devices containing microprocessors or similar		P
	Test carried out according to IEC 61000-4-3 applying a field strength of 3 V/m in the frequency range 80 MHz to 1000 MHz and 1400 MHz to 2000 MHz:		P
	Electronic switch shall be loaded with resistive load only.		P
	During the test, the electronic switch is operated, if it contains automatics functions or can be remotely controlled		P
	During the test , the electronic switch shall operate as intended, flickering is not allowed.		P
	Flickering of lamps or irregular running of motors due to the switching transient caused by frequency changes of the test equipment during the test procedure is neglected.		P
26.1.6	Radio-frequency voltage test		P
	Test applicable only to electronic switches containing infra-red (IR) receivers, radio frequency receivers, passive infra-red (PIR) devices, devices containing microprocessors or similar		P
	Electronic switch shall be loaded with resistive load only.		

EN 60669-1& EN 60669-2-1			
Clause	Requirement + Test	Result - Remark	Verdict
	Test carried out according to IEC 61000-4-6 applying a conducted radio-frequency voltage of 3 V r.m.s. on supply lines and control lines:		P
	During the test, the electronic is operated, if it contains automatics functions or can be remotely controlled		P
	During and after the test, the electronic switch shall operate as intended, flickering is not allowed.		P
	Flickering of lamps or irregular running of motors due to the switching transient caused by frequency changes of the test equipment during the test procedure is neglected.		P
26.1.7	Power-frequency magnetic field test		N
	Test applicable only to electronic switches containing devices susceptible to magnetic fields, for example, Hall elements, electrodynamic		N
	Test carried out according to IEC 61000-4-8 applying a magnetic field of 3 A/m, 50 Hz:		N
	Electronic switch shall be loaded with resistive load only.		N
	During the test, the electronic is operated, if it contains automatics functions or can be remotely controlled		N
	Flickering of lamps or irregular running of motors due to the switching transient caused by frequency changes of the test equipment during the test procedure is neglected.		N
26.2	Emission		P
26.2.1	Low-frequency emission		P
	Electronic switches designed that they do not cause excessive disturbances in the network		P
	Electronic switch complies with IEC 61000-3-2 and IEC 61000-3-3		P
	This requirements applies to each channel of a multichannel dimmer provided that the channel are independent from each other		P
	Load terminals/terminations of electronic switches with electromechanically operated contact mechanism (for example, a relay), do not cause harmonic current emissions and are deemed to meet the requirements of IEC 61000-3-2 without need for testing. Therefore only the mains supply terminal/terminations of those products shall be tested.		
26.2.2	Radio-frequency emission		P
	Electronic switches designed that they do not cause excessive radio interference		P
	Electronic switch complies with the requirements of CISPR 14 or CISPR 15.		P

EN 60669-1& EN 60669-2-1			
Clause	Requirement + Test	Result - Remark	Verdict
	Electronic switch complies with the requirements of CISPR 15 (modified on sub-clauses 8.1.4.2 and 8.1.4.3)		P
<b>101</b>	<b>ABNORMAL CONDITIONS</b>		<b>P</b>
	Electronic switches do not create hazard under abnormal conditions		P
	If in case of failure the maximum power taken by the electronic switches is less than 0,5 W, the requirements of the abnormal condition are deemed to be met		P
101.1.1.1	Fault conditions test: temperature rises not exceed the values given in table 102, column concerning clause 101	See appended table 101.1.1.1	P
	Temperature limited by a fuse: additional test carried out in case of doubt	See appended table 101.1.1.1	P
101.1.1.2	Electronic switches without incorporated temperature-limiting devices and without incorporated fuses:		N
	Test current: conventional tripping current $I_f$ (A) for 1h of the fuse which, in the installation, will protect the electronic switch .....		--
	Temperature rise measured after steady state or after 4h		N
	Electronic switches protected by automatic protective devices (including fuses):		P
	Current with which the protecting device releases after 1 h (A) .....		--
	Test current: 0.95 times the current with which the protecting device releases after 1 h (A) .....		--
	Temperature rise measured after steady state or after 4 h .....	See appended table 101.1.1.2	N
	Electronic switches protected by incorporated fuses complying with IEC 60127:		P
	Rated current of incorporated fuse (A) .....	250 V; 5A; T; 1500 A breaking capacity	--
	Test current: $2.1 I_n$ (A) .....	$5A \times 2.1 = 10.5A$	--
	Temperature rise measured after 30 min .....	See appended table 101.1.1.2	P
	Additional test on new specimen shall be carried out, if in any of the previous test the electronic switch turn off before the temperature has been steady state:		P
	Test current: $1.1 I_n$ (A) .....	264V	—
	Test current then increased by 10% until temperature stabilize .....		—
	The above test is repeated by 10 % until the conventional tripping current of the protective device is reached or the electronic switch is destroyed .....		—

<b>CENELEC COMMON MODIFICATIONS (EN)</b>			
<b>8</b>	<b>MARKING</b>		<b>P</b>
8.1 (Annex B)	Paragraph added at the end of this subclause:		<b>N</b>
	Flexible cable outlet switches: information of minimum and maximum sizes for which the anchorage is provided put on the switch and/or the packaging unit		<b>N</b>
8.3	First sentence of last paragraph before note 2 replaced by:		<b>P</b>
	Marking is clearly visible with normal or corrected vision, without additional magnification, marked either on the front of the switch or on the inner part of its associated enclosure, or on the main part of the switch so that it is easy legible during installation		<b>P</b>
8.6	First sentence of the first paragraph replaced by:		<b>N</b>
	Switches of pattern numbers 2, 3, 03 and switches with $V_n > 250$ V and $I_n > 16$ A if marked to indicate the switch position: direction of movement of the actuating member to its different positions or the actual switch position, clearly indicated .....		<b>N</b>
8.8	Note 2 changed into a requirement and its first sentence replaced by:		<b>N</b>
	Special precautions necessary to take when installing the switch: details of these and clear information given in an instruction sheet which accompanies the switch		<b>N</b>
<b>9</b>	<b>CHECKING OF DIMENSIONS</b>		<b>N</b>
	Paragraph added after the first paragraph:		<b>N</b>
	Type of boxes in which switches are to be mounted: specified in the manufacturer's catalogue		<b>N</b>
<b>10</b>	<b>PROTECTION AGAINST ELECTRIC SHOCK</b>		<b>N</b>
10.1	Additional requirement (IEC 60669-1/A1) concerning switches designed to be fitted with pilot lights supplied at voltage other than ELV is deleted		<b>N</b>
10.3	First two line replaced by the following:		<b>P</b>
	Accessible parts of switches are made of insulating material		<b>P</b>

EN 60669-1& EN 60669-2-1			
Clause	Requirement + Test	Result - Remark	Verdict
	"cover or cover plates" replaced by "cover, cover plates and other parts of the enclosure"		N
10.3.1	Replaced by:		N
	Metal covers, cover plates or other parts of enclosure protected by supplementary insulation made by insulating linings or insulating barriers		N
	Insulating linings or insulating barriers:		N
	- cannot be removed without being permanently damaged, or designed that		N
	- cannot be replaced in an incorrect position; if they are omitted, accessories are rendered inoperable or manifestly incomplete; there is no risk of accidental contact between live parts and metal covers or cover plates; precautions are taken to prevent creepage distances or clearances becoming less than the values specified in clause 23		N
10.3.2	Replaced by:		N
	Earthing of metal covers, cover plates or other parts of enclosure: connection of low resistance		N
<b>11</b>	<b>PROVISION FOR EARTHING</b>		N
11.1	Notes 1 and 2 changed into requirements:		N
	Requirement did not apply to the metal cover plates mentioned in 10.3.1		N
	Small screws and the like, isolated from live parts, for fixing bases, covers or cover plates, were not considered as accessible parts which can become live in the event of an insulation fault		N
11.2	Second paragraph replaced by:		N
	Earthing terminals have a capacity not less than that of the corresponding terminals for the supply conductors		N
<b>12</b>	<b>TERMINALS</b>		P
12.2.4	Second paragraph replaced by:		P
	Terminals the body of which is made of materials as detailed in 22.5 considered as complying with the requirement		P
12.2.5	Paragraph before note 4 deleted		N
12.2.6	"in case where they exist in the relevant IEC standard" in the last paragraph replaced by "if any, according to HD 21.3		N
12.3.1	Present note numbered as note 1 and added new note 2:		N
	Tests of 12.3.12 carried out using rigid solid conductors only		N
<b>13</b>	<b>CONSTRUCTIONAL REQUIREMENTS</b>		N
13.16 (Annex B)	First paragraph replaced by:		N
	Flexible cable outlet switches: flexible cable (60245 IEC 66, 60227 IEC 52 or 60227 IEC 53, or as specified by the manufacturer) enter the switch through a suitable hole, groove or gland .....		N
	Last but one paragraph replaced:		N

EN 60669-1& EN 60669-2-1			
Clause	Requirement + Test	Result - Remark	Verdict
	An a.c. voltage of 2000 V applied for 1 min between the conductors and any metal clamp of the cord anchorage		N
	During the test: insulation of flexible cable not damaged (no breakdown or flashover)		N
	Subclause added at the end:		N
	Flexible cable outlet switches:		N
	- clear how relief from strain and prevention of twisting is intended to be effected		N
	- cord anchorage, or at least part of it, integral with or permanently fixed to one of the component parts of the switch		N
	- makeshift methods not used		N
	- cord anchorages suitable for different type of flexible cables		N
	Rewirable switches with earthing connection are designed with ample space for slack of the earthing conductor		N
<b>19</b>	<b>NORMAL OPERATION</b>		P
19.102	Paragraph added after the first paragraph:		P
	This is not applicable to dimmers for step-down converters as these accessories are tested according to 19.101		P
<b>22</b>	<b>SCREWS, CURRENT-CARRYING PARTS AND CONNECTIONS</b>		N
22.1	Second sentence of the second paragraph deleted		N
<b>23</b>	<b>CREEPAGE DISTANCES, CLEARANCES AND DISTANCES THROUGH SEALING COMPOUND</b>		P
23.3	Subclause added:		P
	Ordinary surface-type switches do not have bare current-carrying strips at the back		P
Table 20	Addition of the following NOTE:		N
Note 3	Items 101 and 102 apply to electronic RCS and TDS only		N
<b>24</b>	<b>RESISTANCE OF INSULATING MATERIAL TO ABNORMAL HEAT, TO FIRE AND TO TRACKING</b>		N
24.1.1	Item b) replaced by:		N
	Parts of insulating material not necessary to retain current-carrying parts and parts of the earthing circuit in position, even though they are in contact with them, and parts of insulating materials necessary to hold in position the earthing terminal in an enclosure, by the test made at a temperature of 650 °C		N
<b>26</b>	<b>EMC REQUIREMENTS</b>		N
	Electronic switches designed to operate correctly under the conditions of electromagnetic environment in which they are intended to be used		N
26.1	Immunity		N
	Electronic switches designed so that the switch state (ON or OFF) and/or the setting value are protected against interference		N
	Type of load .....		—
	Test current: In (A) / Rated load (W or VA) .....		—
	Test voltage: Vn (V) .....		—

EN 60669-1& EN 60669-2-1			
Clause	Requirement + Test	Result - Remark	Verdict
	Electronic switches tested, if applicable, in the following states (test parameters referred to table 104):		N
	a) in the ON state		N
	For electronic switches where the setting can alter (e.g. dimming devices) the electronic switch is set at a firing angle of approx. 90° which results in an output power $P_o$ (r.m.s.).		N
	A variation of $P_o$ less than 10 % is not considered to be a change of the setting.		N
	b) in the OFF state		N
	For the tests with operation, the electronic switch shall be switched ON/OFF with an operation rate of 1 operation/second or less, or the setting value shall be changed e.g. from minimum to maximum		N
	For electronic switches whose cycle of operation is limited by their application (for example, passive infrared, time delay electronic switches, etc.), the rate of operation during the tests shall be specified by the manufacturer.		N
26.1.1	Voltage dips and short interruptions		N
	Electronic switch tested using the equipment specified in IEC 61000-4-11 in accordance with table 105: sequence: 3 dips/interruptions (duration: 10 cycles at rated frequency) with interval of 10 s minimum between each test event:		N
	Test level: 0 % $U_T$		N
	Test level: 40 % $U_T$		N
	Test level: 70 % $U_T$		N
	The test shall be done on the power supply lines of the electronic switch.		N
	During the test, the electronic switch is not operated.		N
	During the test, the state and setting of the electronic switch may alter, flickering is neglected		N
	After the test, the electronic switch shall be in the original state and setting and shall operate as intended		N
	After the test, the general purpose electronic switch with included automatic functions shall operate as intended		N
26.1.2	Surge immunity test for 1,2/50 $\mu$ s wave impulses		N
	Test carried out according to IEC 61000-4-5 applying two positive discharges and two negative discharges at each of the following angles 0°, 90°, 270°, at a repetition rate of $(60 \pm 5)$ s, with an open-circuit test voltage according to Table 106		N
	During the test, the electronic switch is not operated.		N
	During the test, the state and setting of the electronic switch may alter, flickering is neglected		N
	After the test, the electronic switch shall be in the original state and setting and shall operate as intended		N
	After the test, the general purpose electronic switch with included automatic functions shall operate as intended		N
26.1.3	Electrical fast transient/burst test		N

## EN 60669-1&amp; EN 60669-2-1

Clause	Requirement + Test	Result - Remark	Verdict
	Test carried out according to IEC 61000-4-4 in accordance with table 107		N
	During the test, the electronic switch is not operated.		N
	During the test, the state and setting of the electronic switch may alter, flickering caused by the electronic switch is allowed		N
	After the test, the electronic switch shall be in the original state and setting and shall operate as intended		N
	After the test, the general purpose electronic switch with included automatic functions shall operate as intended.		N
26.1.4	Electrostatic discharge test		N
	Electronic switch not intended to operate incandescent lamp: test carried out with only one load of the loads specified within the manufacturer's instructions .....		N
	Test carried out according to EN 61000-4-2 applying 10 positive and 10 negative discharge:		N
	- contact discharge to the conductive surface and to coupling planes (test voltage: 4 kV)		N
	- air discharge at insulating surfaces (test voltage: 8 kV)		N
	During the test, the electronic switch is not operated.		N
	During the test, the state and setting of the electronic switch may alter, flickering is neglected		N
	After the test, the electronic switch shall be in the original state and setting and shall operate as intended.		N
	After the test, the general purpose electronic switch with included automatic functions shall operate as intended		N
26.1.5	Radiated electromagnetic field test		N
	Test applicable only to electronic switches containing infra-red (IR) receivers, radio frequency receivers, passive infra-red (PIR) devices, devices containing microprocessors or similar		N
	Test is carried out according to EN 61000-4-3 by applying a field strength of 3 V/m in the frequency range 80 MHz to 1 000 MHz and 1 400 Mhz to 2000 MHz with the exception of the exclusion band as defined in the relevant product standard for transmitters, receivers and duplex transceivers		N
	During the test, the electronic switch is operated, if it contains automatic functions or can be remotely controlled		N
	During and after the test, the electronic switch shall operate as intended, flickering is not allowed		N

EN 60669-1& EN 60669-2-1			
Clause	Requirement + Test	Result - Remark	Verdict
	Flickering of lamps or irregular running of motors due to switching transients caused by frequency changes of the test equipment during the test procedure is neglected		N
	After the test, the general purpose electronic switch with included automatic functions shall operate as intended		N
26.1.6	Radio-frequency voltage test		N
	Test applicable only to electronic switches containing infra-red (IR) receivers, radio frequency receivers, passive infra-red (PIR) devices, devices containing microprocessors or similar		N
	Test carried out according to IEC 61000-4-6 applying a conducted radio-frequency voltage of 3 V r.m.s. on supply lines and control lines:		N
	During the test, the electronic switch is operated, if it contains automatic functions or can be remotely controlled.		N
	During and after the test, the electronic switch shall operate as intended, flickering is not allowed		N
	Flickering of lamps or irregular running of motors due to switching transients caused by frequency changes of the test equipment during the test procedure is neglected		N
	After the test, the general purpose electronic switch with included automatic functions shall operate as intended		N
26.1.7	Power-frequency magnetic field test		N
	Test applicable only to electronic switches containing devices susceptible to magnetic fields, for example, Hall elements, electro dynamic microphones, etc.		N
	Test carried out according to IEC 61000-4-8 applying a magnetic field of 3 A/m, 50 Hz:		N
	During the test, the electronic switch is operated, if it contains automatic functions or can be remotely controlled..		N
	During and after the test, the electronic switch shall operate as intended, flickering is not allowed.		N
	Flickering of lamps or irregular running of motors due to switching transients caused by frequency changes of the test equipment during the test procedure is neglected		N
	After the test, the general purpose electronic switch with included automatic functions shall operate as intended		N
26.2	Emission		N
26.2.1	Low-frequency emission		N
	Electronic switches designed that they do not cause excessive disturbances in the network		N
	Electronic switch complies with IEC 61000-3-2 and IEC 61000-3-3		N

EN 60669-1& EN 60669-2-1			
Clause	Requirement + Test	Result - Remark	Verdict
	Electronic switches with electromechanically operated contact mechanism (for example, a relay) are deemed to meet the requirements of IEC 61000-3-2 without need for testing. Therefore only the mains supply terminal/terminations of those products shall be tested		N
26.2.2	Radio-frequency emission		N
	Electronic switches designed that they do not cause excessive radio interference		N
	a) Electronic switch complies with the requirements of EN 55014: 2006 (sub clause 8.1.4.1) at the mains terminals		N
	b) Electronic switch complies with the requirements of EN 55015: 2006 (sub clause 8.1.4.2) at the load and/or control terminals		N
<b>101</b>	<b>ABNORMAL CONDITIONS</b>		N
101.1.1.2	Addition of the following NOTE:		N
	The tripping current of the protective devices (e.g. fuses, automatic protective devices, etc.) to be used for the verification of electronic switches without incorporated temperature-limiting devices and without incorporated fuses is in accordance with the rated current of the protective device, specified by the manufacturer, intended to protect the electronic switch		N
	Information regarding the protective device which is intended to protect the electronic switch are specified by the manufacturers in the instruction sheets provided with the products		N
<b>102</b>	<b>COMPONENTS</b>		N
102.4.1.2	Note replaced by the following test requirement:		N
	For cut-outs in electronic switches for fluorescent lamps, the tests are carried out in the same way as for electronic switches for incandescent lamps		N
<b>ZB</b>	<b>ANNEX ZB, SPECIAL NATIONAL CONDITIONS</b>		N
7.1.7	BELGIUM, CZECH REPUBLIC, FINLAND, GERMANY, NETHERLANDS, NORWAY, SWEDEN: design B not used due to installation practice		N
8.1	DENMARK: symbol for earth for any space provided for an earthing terminal		N
	UNITED KINGDOM: marking of type reference not used		N
8.3	UNITED KINGDOM: marking of type reference not used		N
10.2	DENMARK, NORWAY: accessories requiring earth connection cannot normally be used due to the lack of an earthing conductor in many existing old buildings		N
10.3	DENMARK: enclosures, including covers and cover plates, may be made of metal:		N

## EN 60669-1&amp; EN 60669-2-1

Clause	Requirement + Test	Result - Remark	Verdict
--------	--------------------	-----------------	---------

	- for ordinary switches which comply with 10.3.1		N
	- for switches with IP>X0 which fulfil with 10.3.1 or 10.3.2		N
10.3.2	DENMARK, NORWAY: accessories requiring earth connection cannot normally be used due to the lack of an earthing conductor in many existing old buildings		N
10.5	DENMARK, NORWAY: accessories requiring earth connection cannot normally be used due to the lack of an earthing conductor in many existing old buildings		N
12.2.5	DENMARK, FINLAND, NORWAY, SWEDEN: - additional test with rigid solid conductors (if exist in relevant IEC standard), if the first test has been made with rigid stranded conductors		N
	- in the case rigid stranded conductors do not exist, the test may be made with rigid solid conductors only		N
12.2.6	DENMARK, FINLAND, NORWAY, SWEDEN: additional test with one rigid solid conductor and one rigid stranded conductor with same cross-sectional areas connected at same time is required for terminals allowing the connection of two conductors		N
13.15.2	DENMARK, FINLAND, NORWAY, SWEDEN, SWITZERLAND: sub-clause mandatory		N
13.103	DENMARK, FINLAND, NORWAY, SWEDEN, SWITZERLAND, UNITED KINGDOM: Flexible cables complying with electrical strength test only are not allowed for external use		N
101.1.1.2	BELGIUM, FRANCE, SPAIN, SWITZERLAND: Electronic switches designed without an associated incorporated protection are loaded for one hour with the conventional tripping current of the associated protection of the lighting circuit (10 A for fuses and 16 A for CB's) .....		N
102.1	UNITED KINGDOM: Fuses according to BS 646 and BS 1362 are deemed to satisfy this requirement .....		N

<b>ZC</b>	<b>ANNEX ZC, A-DEVIATIONS</b>		<b>N</b>
11.2	BELGIUM: earthing terminals have a capacity not less than that of corresponding terminals for the supply conductors except that any additional external earthing terminal shall be of a size suitable for conductors of at least 4 mm <sup>2</sup>		N
13.103	DENMARK (Stærkstømbekendtgørelsen- Elektriske Installationer 2001, § 521.7.4)		N
	The insulation of external flexible cable complies with or is at least electrically and mechanically equivalent to that of flexible cables according to HD 21 or HD 22		N

EN 60669-1& EN 60669-2-1			
Clause	Requirement + Test	Result - Remark	Verdict
13.103	FINLAND (Electrical Safety Act 410/1996, Degree of Ministry of Trade and Industry No. 1193/99, paragraph 4 Publication S10-2002 of the Finnish Safety Technology Authority, Finnish wiring rules SFS 6000-5-52 (HD 384.5.52), Clause 521, Table 52F)		N
	The insulation of external flexible cable complies with or is at least electrically and mechanically equivalent to that of flexible cables according to HD 21 or HD 22		N
13.103	NORWAY (DSB: FEL 1998 §28 and §10, NEK 400:2002 Clauses 520.1 and 521.1 and Table 52A)		N
	Cables with basic insulation are not accepted as wiring external to the switch. The insulation of external flexible cable complies with or is at least electrically and mechanical equivalent to that of flexible cables according to HD 21 or HD 22		N
	Cables complying with the electric strength test only are regarded as internal cables and are accepted to be installed in enclosures, conduits, ducting and trunking systems and the like		N
13.103	SWEDEN (ELSÄK-FS: 1999:5, Clauses 520.1 and 521.1 and Table 52-1)		N
	Cables with basic insulation are not accepted as wiring external to the switch. The insulation of external flexible cable complies with or is at least electrically and mechanical equivalent to that of flexible cables according to HD 21 or HD 22		N
	Cables complying with the electric strength test only are regarded as internal cables and are accepted to be installed in enclosures, conduits, ducting and trunking systems and the like		N
